ENERGY FOR HEALTH

E4H QUARTERLY MILESTONES AND UPDATES

Welcome to the largest global Energy for Health programme in the world! As we march along to reach the last mile, we shall encapsulate some of their stories and ours- stories from the grassroots and more. We hope to highlight some of the challenging yet exciting issues in our field. In this first issue of our newsletter series, we will be mostly be recapping some of the milestones of the recent past.

Health for all- A Happy Story. ASHA workers resting after a hard day of community service in a Primary Health Centre at Yadgir District, Karnataka

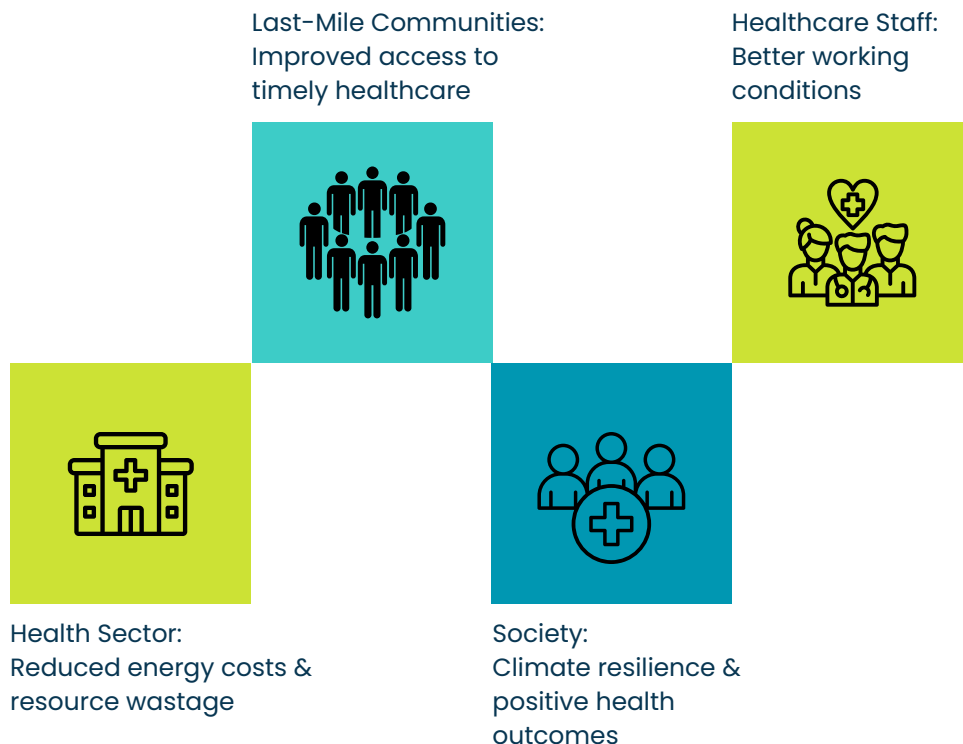

The Mission

In 2023, in a significant step towards transforming the public health infrastructure, SELCO Foundation and IKEA Foundation launched a groundbreaking program in partnership with India's Ministry of Health and Family Welfare (MoHFW) and various State Health Missions— Energy for Health(E4H).

Under this program, 100 MW of solar energy systems, complete with energy-efficient medical and electrical equipment, will be installed at 25,000 healthcare facilities in 12 States by 2026.

A WIN-WIN

E4H brings with it positive impact across the spectrum of stakeholders:

Following The

Voices from the Frontlines

COFFEE TABLE BOOKS: We have compiled four coffee table books on health covering the states of Assam, Meghalaya, Mizoram and Karnataka. Titled “Following the Sun”, we hear from the people who are creating the solutions as well as those who are accessing and using them. Voices from all across and their take on solar power and more is captured

The Focus States:

The 12 states- Karnataka, Gujarat, Maharashtra, Odisha, Jharkhand, Sikkim, Assam, Arunachal Pradesh, Meghalaya, Mizoram, Manipur, and Nagaland under the programme throw up a rich diversity in terms of topography, socio-economic vulnerabilities, disease burden, and climate. Of these, we have successfully solarized all health facilities in Karnataka, Maharashtra, Mizoram, and Meghalaya. As we innovate on approaches, models, and processes for this melange, they will emerge as a global showcase and knowledge bank for similar contexts in any country

Saura-eMitra Digital Platform

Developed with eGov Foundation, **Saura-eMitra** is a digital platform that enables **real-time monitoring** of solar infrastructure in public health centers—ensuring **accountability, efficiency, and long-term resilience** in healthcare delivery.

Built on the **DIGIT platform**, it simplifies the **reporting and resolution** of issues, leading to quicker response times and more reliable solar systems in critical facilities.

*By strengthening **Operation and Maintenance (O&M)**, Saura-eMitra helps sustain the impact of solar interventions and supports uninterrupted healthcare services*

Now active in **2219+ centers** across Karnataka, the platform is set to expand to over **5676+ centers** across India, advancing the use of technology for sustainable public health.

Ensuring Adoption and Ownership

Along with State Governments, SELCO Foundation is building solutions for Sustained impact. Learn more about Operations and Maintenance Models as well as Grassroot Trainings below.
